

Anti-Skid Mats N-83-132

Long-wearing anti-skid rubber floor mats are now available from Bally. These heavy-duty mats can help reduce the risk of slips in Walk-Ins and can also cut employee fatigue on the job.

Each mat, measuring 39" x 29¼", is designed to give positive footing even where slick floors are a problem. Round holes with raised gripping edges provide sure traction underfoot. A special dimpled pattern on the underside of the mat helps keep it in place to prevent accidents.

The cushioned support built into the mats also reduces worker fatigue-another factor in reducing slips and falls. Because the mat is thicker than many competitive mats, it provides more resilient support.

The mat's single-wall construction prevents the build-up of residue. The underside dimples keep the mat drained, so its upper surface stays dry even if the floor is wet. In cooler installations without Bally floors, a mat can be washed without moving it. (The mats must be removed for cleaning from all freezers and from cooler installations with Bally floors.)

The mats are resistant to grease, oil, and fats. In the brown color offered by Bally they are NSF approved.

For applications where hand-trucks or carts are used, beveled ramp corners are a necessity. Bally also offers mat connections.
